; Sequence 5159, Application US/09198452A

; Patent No. 655294

; GENERAL INFORMATION:

APPLICANT: Griffais, R.

TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, preverting of INVENTION: and treatment of infection

TITLE OF INVENTION: and treatmen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 440

US-09-198-452A-5166/c

Sequence 5166, Application US/09198452A

Patent No. 6559294

GENERAL INFORMATION:

APPLICANT: GFIffals, R.

TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragment;

TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, prev.

TITLE OF INVENTION: and treatment of infection

TITLE REPRESENCE: 9710-003-999

CURRENT APPLICATION NUMBER: US/09/198,452A
APPLICANT: Cohen, Daniel
APPLICANT: Cohen, Daniel
APPLICANT: Cohen, Daniel
APPLICANT: Chumakov, 11ya
TITLE OF INVENTION: Biallelic markers for use in constructing a high density...
TITLE REFERENCE: GENNET.020CP1
CURRENT APPLICATION NUMBER: US/09/422,978
CURRENT APPLICATION NUMBER: US/09/298,850
EARLIER PPLICATION NUMBER: US 60/109,732
EARLIER APPLICATION NUMBER: US 60/109,732
EARLIER APPLICATION NUMBER: US 60/109,732
EARLIER PLING DATE: 1999-11-23
EARLIER PLING DATE: 1998-11-23
EARLIER PLING DATE: 1998-04-21
NUMBER OF SEQ ID NOS: 11796
SEQ ID NO 7460
LENGTH: 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

Sequence 2437, Application US/08373124A

Patent No. 5646010:
GENERAL INFORMATION:
APPLICANT: Stinchcomb, Dan T.
APPLICANT: Draper, Kenneth
APPLICANT: McSwiggen, James
APPLICANT: Jarvis, Thale
TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR
TITLE OF INVENTION: TREATMENT OF RESTENOSIS AND
TITLE OF INVENTION: CANCER USING RIBOZYMES
NUMBER OF SEQUENCES: 2627
CORRESPONDENCE ADDRESS:
ADDRESSEE: Lyon & Lyon
STREET: S13 West Fifth Street
STREET: Suite 4700

Sequence 310, Application US/09544398B

Patent No. 6770461

GENERAL INFORMATION:

APPLICANT: Carulli, John P.

APPLICANT: Carulli, John P.

APPLICANT: Recker, Robert R.

APPLICANT: Johnson, Mark L.

TITLE OF INVENTION: High bone mass gene of 11q13.3

FILE REFERENCE: 032796-013

CURRENT APPLICATION VUMBER: US/09/544,398B

CURRENT FILING DATE: 1299-01-13

PRIOR APPLICATION NUMBER: US 60/71,449

PRIOR FILING DATE: 1998-01-13

PRIOR FILING DATE: 1998-01-13

PRIOR FILING DATE: 1998-01-13

NUMBER OF SEQ ID NOS: 641

SOFTWARER: FREEEN FARLENT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 458
US-09-980-052-219/c
US-09-980-052-219/c
; Sequence 219, Application US/09980052
; Patent No. 6670130
; GENERAL INFORMATION:
APPLICANT: KIM, Jeong Joon; SJ HIGHTECH Co., Ltd.
APPLICANT: KIM, Cheol Min
APPLICANT: KIM, Cheol Min
TILLE OF INVENTION: Oligonuclectide for detection and identification of Mycobacteria
TILLE REFERENCE: PP05020/PCT
CURRENT APPLICATION NUMBER: US/09/980,052
CURRENT FILING DATE: 2001-11-28
FRIOR APPLICATION NUMBER: KR 10-1999-0019631
PRIOR PLING DATE: 1999-05-29
PRIOR FILING DATE: 1999-05-29
PRIOR FILING DATE: 1999-05-29
                                                                                                                                                                                                                                                                   APPLICANT: GIESENDORF, BELINDA
APPLICANT: GIESENDORF, BELINDA
APPLICANT: QUINT, WILHELMUS
APPLICANT: VAN DOORN, LERDBERT-JAN
TITLE OF INVENTION: NEW POLYNUCLEIC ACID SEQUENCES FOR USE IN THE
TITLE OF INVENTION: DETECTION AND DIFFERENTIATION OF PROKARYOTIC ORGANISMS
NUMBER OF SEQUENCES: 96
CORRESPONDENCE ADDRESS:

Sequence 588, Application US/09543771B

Patent No. 6780609

Patent No. 6780609

APPLICANT: Carulli, John P.

APPLICANT: Little, Randall D.

APPLICANT: Little, Randall D.

APPLICANT: Johnson, Mark L.

TITLE OF INVENTION: High bone mass gene of 11q13.3

FILE REFERENCE: 032796-014

CURRENT APPLICATION NUMBER: US/09/543,771B

CURRENT PILING DATE: 2000-04-05

PRIOR PILING DATE: 1999-01-13

PRIOR FILING DATE: 1999-01-13

PRIOR FILING DATE: 1998-01-13

PRIOR FILING DATE: 1998-10-13

NUMBER OF SEQ ID NOS: 641

SOFFWARE: FastSEQ for Windows Version 4.0

LENGTH: 19

TENDY PATENTION NUMBER: US 60/105,511

PRIOR FILING DATE: 1998-10-23

NUMBER OF SEQ ID NOS: 641

SEQ ID NO 588

LENGTH: 19

TENDY PATENTION NUMBER: US 60/105,511
